

CSafe Signs Master Lease Agreement with DHL

November, 2011 – CSafe, LLC, manufacturer of the AcuTemp® RKN active temperature-controlled cargo container announced that DHL Global Forwarding signed a master lease agreement for CSafe's AcuTemp RKN active temperature-controlled containers.

The agreement enhances the product offerings provided by DHL in meeting the needs of healthcare and pharmaceutical customers that require strict temperature control of their products during transport. The AcuTemp RKN offers the superior performance needed for shipping products with temperature requirements between +4°C to + 25°C.

“We are the first European-based freight forwarder to sign this type of leasing agreement with CSafe, thus expanding our services for Life Sciences customers and leveraging our leadership role in the market,” says Laura Ackermann, Global Head Life Sciences Operations, Air Freight, DHL Global Forwarding.

“DHL has a reputation for providing its customers with solutions that provide significant overall value. We are excited that DHL Global Forwarding will now be able to offer our container to their customers worldwide,” stated Brian Kohr, President of CSafe. “We are confident that DHL customers will benefit from the reliable performance of the AcuTemp RKN and from the attention to detail offered by DHL in meeting the cold chain logistics needs of their customers,” said Kohr.

The superior performance of the CSafe AcuTemp RKN can be attributed to the thermal capabilities of ThermoCor® insulation which provides extended operating efficiencies as well as the unit's proprietary air movement, heating, and cooling systems that allow the AcuTemp RKN to consistently maintain the user-selected payload set-point across ambient temperatures as extreme as -30°C up to +49°C. The operating efficiency of the unit allows for a full load of product inside the container without the need for secondary packaging. This makes the AcuTemp RKN a cost effective solution compared to dry ice and other passive containers. The immediately accessible data logging and overall ease of use also make it a very good selection for life science customers.

CSafe, LLC provides solutions for the temperature-sensitive air freight market. Its flagship product, the AcuTemp RKN, is the first active controlled air container with FAA, EASA, Transport Canada, Hong Kong CAD, Irish Aviation Authority IAA and Israel CAA approvals. CSafe products are marketed through many global logistic partners and are designed to address the stringent requirements of the temperature-sensitive air cargo market. Since its launch in 2008, thousands of successful shipments have been made with the AcuTemp RKN. Headquartered in Dayton, Ohio, USA, CSafe, LLC is a joint venture between AmSafe Inc. and AcuTemp Thermal Systems. AcuTemp is the world's largest producer of actively controlled mobile refrigeration units for life sciences, healthcare, military and international disaster relief agencies.
