

## CSafe Introduces New Product

**Effective January 30, 2012** – To further enhance the CSafe cold chain solution portfolio, CSafe introduced a new addition to their family of temperature management solutions at IQPC Basel, Switzerland. The CSafe AcuTemp SVS is designed to meet the growing need of pharmaceutical manufacturers to have a compact active compressor driven heating and cooling shipping container with the same reliable performance as the CSafe AcuTemp RKN. The SVS shares the same temperature management and data recording features of the CSafe AcuTemp RKN, but in a size that reduces the footprint of shipping less than full pallet loads.

“We’ve had ongoing conversations with top life science manufacturers and in response to their input, are delighted to introduce the CSafe AcuTemp SVS;” stated Brian Kohr, President of CSafe LLC. “The design and size of the SVS allows for more options and flexibility of flight schedules and can ship on wide body aircraft as part of a combined airline palletized load. As with all AcuTemp products, the thermal design and refrigeration technology maintains temperature-sensitive products at The Right Temperature® during storage and transport.”

The CSafe AcuTemp SVS is easy to use without conditioning of gel packs or PCM's and does not require dry ice. Just set the temperature and load. The SVS is equipped with a display window for continuous performance tracking, advanced data logging, and data download via USB for verification of temperature performance. Complete with integral tie-down strap guides for security during transport, the SVS can be moved via pallet truck or fork lift truck with accessibility from all four sides of the uniquely designed pallet.

CSafe, LLC provides solutions for the temperature-sensitive air freight market. Its flagship product, the AcuTemp RKN, is the first and only active controlled air container with FAA, EASA, Transport Canada, Hong Kong CAD, Irish Aviation Authority IAA and Israel CAA approvals. CSafe products are marketed through many global logistic partners and are designed to address the stringent requirements of the temperature-sensitive air cargo market. Since its launch in 2008, thousands of successful shipments have been made with the AcuTemp RKN. Headquartered in Dayton, Ohio, USA, CSafe, LLC is a joint venture between AmSafe Inc. and AcuTemp Thermal Systems. AcuTemp is the world's largest producer of actively controlled mobile refrigeration units for life sciences, healthcare, military and international disaster relief agencies.
